Monsoon 2025-Situation Report-01

Heavy Rainfall and Strong Winds in Hyderabad, Jamshoro, and Kotri

July 14, 2025 (1930 hrs)

Fast Rural Development Program is providing an urgent update regarding the severe weather conditions affecting Hyderabad, Jamshoro, and Kotri in Sindh Province, Pakistan.

Current Situation

As of today, July 14, 2025, Hyderabad has recorded approximately 53mm of rainfall(unofficial yet), accompanied by strong winds. This has led to significant disruptions, including:

1. Electricity supply has been interrupted across multiple areas due to the heavy rain and gusty winds, with several Hyderabad Electric Supply Company (HESCO) feeders shut down.
2. Major roads are choked with water accumulation, causing severe traffic disruptions and hindering mobility.
3. The ongoing power outage is impeding water pumping operations both to drain as well supply drinking water to citizens of Kotri and Hyderabad, exacerbating waterlogging in low-lying areas.

Weather Forecast

According to recent updates from the Pakistan Meteorological Department and local weather sources, additional showers are expected later tonight in Hyderabad and surrounding areas, including Mirpurkhas and Tando Allahyar. If rainfall continues and electricity is not restored, the situation may worsen, potentially leading to urban flooding and further infrastructure challenges. Cumulative Causalities – Deaths / Injuries (25-06-2025 to 13-07-2025)

FRDP Response

While no official figures of today's rain have been released by concerned authorities, FRDP has proactively activated its Emergency Response Team (ERT). Our field-based facilitators across Sindh are closely monitoring the situation and providing real-time updates to the ERT. Based on their assessments, FRDP will determine the appropriate response measures to address the evolving crisis.

Next Steps:

FRDP is committed to keeping all partners informed as the situation develops. We will continue to coordinate with local authorities and our field teams to assess the impact and plan necessary interventions. Partners are requested to stay tuned for further updates.

For any immediate concerns or additional information, please contact the FRDP Emergency Response Team at the following contact information
